This section may contain indiscriminate, excessive, or irrelevant examples. Please improve the article by adding more descriptive text and removing less pertinent examples. See Wikipedia's guide to writing better articles for further suggestions. (February 2017)

### **Backbone.js - Wikipedia**

Backbone.js is a very commonly used framework, however, using Backbone effectively and in a modular, reusable way is not easy to do. Each chapter covers the basics in a very concise way and moves on to more useful concepts and examples applicable to developing a real world application.

### **Backbone.js Patterns and Best Practices: Swarnendu De**

Summary: demonstration of how to build Backbone.js application from scratch and use views, collections, subviews, models, event binding, AMD, Require.js on the example of the apple database application.   
"Code is not an asset. It's a liability. The more you write, the more you have to maintain later." Unknown. Setting up Backbone.js App from Scratch

### **Rapid Prototyping with JS: Agile JavaScript Development in**

AngularJS (also written as Angular.js) is a JavaScript-based open-source front-end web application framework mainly maintained by Google and by a community of individuals and corporations to address many of the challenges encountered in developing single-page applications. The JavaScript components complement Apache Cordova, a framework used for developing cross-platform mobile apps.

### **AngularJS - Wikipedia**

I have spent the last decade developing J2EE web applications with traditional frameworks like Struts and Spring MVC. I am very new to SPA and have only looked briefly at a few frameworks and frankly I had a lot of concerns of how SPA could be used for creating complex applications and more importantly how you could troubleshoot and support a SPA application.

Accessibility concerns in Electron applications are similar to those of websites because they're both ultimately

HTML. With Electron apps, however, you can't use the online resources for accessibility audits because your app doesn't have a URL to point the auditor to.
