Digital television (DTV) is the transmission of television signals, including the sound channel, using digital encoding, in contrast to the earlier television technology, analog television, in which the video and audio are carried by analog signals. It is an innovative advance that represents the first significant evolution in television technology since color television in the 1950s.

Johnson's "Nyquist noise (sometimes thermal, Johnson or Nyquist noise) is unavoidable, and generated by the random thermal motion of charge carriers (usually electrons), inside an electrical conductor, which happens regardless of any applied voltage.. Thermal noise is approximately white, meaning that its power spectral density is nearly equal throughout the frequency spectrum.

3070 - Tracker / DSP TNC with Robust Packet. The SCS Tracker / DSP TNC is the first Terminal Node Controller (TNC) to use a Digital Signal Processor (DSP) for signal processing and modem operation. The close relationship between the DSP hardware and the modem protocol enables new functions and capabilities.

2. TYPICAL TRANSISTOR CIRCUIT- This is a silicon transistor circuit showing typical voltage values. When the forward base/emitter voltage is 0.6 to 0.7 V, the transistor is silicon. Germanium transistors will have a forward base/emitter bias voltage of 0.2 to 0.3 V This is a silicon transistor because 2.6 base volts minus 1.9 emitter volts equal a forward bias of 0.7 volts indicating a silicon ...
