

## The Free High School Science Texts: A Textbook for High

Domaine de la fusion froide. Pour les chercheurs en fusion nucléaire standard, le mot « fusion » désigne la formation d'un noyau atomique à partir de deux autres projetés violemment l'un contre l'autre à une vitesse très élevée (qui peut être issue par exemple d'une température très élevée, de l'ordre de plusieurs millions de degrés).

Product development and innovation is at the heart of growth but often needs costly technology support. FUSION can provide that support by helping to fund a high calibre science, engineering or technology graduate and partnering you with a third level institution with specific expertise.

4.1.1. Closing of the mould. The first step in the steam-chest moulding cycle is the closing of the mould.

4.1.2. Filling of the mould. Foamed beads are drawn by air pressure out of a container and blown into the mould by an injector, which usually functions according to the venturi-principle.

Histoire. La découverte des réactions de fusion date du début du XX<sup>e</sup> siècle. Après quelques expériences, l'astrophysicien Arthur Eddington suggère en 1920 que l'énergie des étoiles est due à la fusion de noyaux d'hydrogène en hélium. En 1934, Ernest Rutherford réalise la première réaction de fusion en laboratoire (entre atomes de deutérium) [5].
